PROJECTS

yelpcamp (full-featured social web app | tech: Node.js, MongoDB, RESTful APIs)
- Brought to life full-stack web app that features CRUD for posts, comments, and accounts
- Improved file management by integrating image-hosting service to the database
- Protected website, user data through user authentication and password encryption

Werdle (variation of Wordle web app | tech: React, SQLite, JavaScript)
- Created full-stack iteration of a popular web app game using a virtual DOM
- Improved aptitude with event handlers and implementing data structures

Columbus Diaper Bank website (JPMorgan Code for Good hackathon | tech: WordPress)
- Collaborated to modernize a legacy website for local non-profit organization
- Overcame unfamiliar technology to Implement a donate feature

Spotify app (in-progress, variation of Spotify Wrapped web app | tech: Node.js, OAuth)
- Used industry-standard authentication protocol for client to access account statistics
- Created visually fun template for sharing user stats to social media

WORK

Bartender – Threes Above High (8/20 – present)
- Communicated efficiently and considerately in fast-paced Ohio State campus bar
- Suggested optimizations to payment system that reduced transaction time by 50%
- Managed 12+ worker staffs on football gamedays and weekend shifts
